

## Screw Extractor Sets

For anyone who has ever struggled with a stripped miniature screw, these unique sets will be welcome additions to the toolbox. One set includes Slotted and Phillips drivers in two sizes each; both sets include hard-to-find miniature screw extractors in four tiny sizes. Don't risk damaging your work! Double-ended precision tools feature hardened steel blades and blue anodized aluminum handles. Packed in a convenient vinyl pouch. **Please note that this item is not guaranteed to remove every broken or stripped screw. It is best used when other methods have failed.**

### INSTRUCTIONS

These screw extractors are of various diameters to suit a range of fasteners sizes. The tips of these screw extractors have "V" shaped ends to engage the irregular ends of the broken or damaged fasteners. We often describe the end as looking like a King's crown. It is not necessary to drill a hole in the center of the fastener. As these fasteners are very small this would be very difficult perhaps resulting in many broken drills.

The preferred method for removing the broken or damaged fastener is to apply the screw extractor to unbroken end of the fastener. Apply hand pressure and rotate the fastener in a clockwise direction. If the unbroken end of the fastener is not accessible (perhaps it is in a blind hole) apply the screw extractor to the broken end, apply hand pressure and rotate counterclockwise. **Please note that this item is not guaranteed to remove every broken or stripped screw. It is best used when other methods have failed.**

All three sets include 4 Screw Extractors:

1.1mm X 1.5mm, 1.25mm X 1.25mm, 1.5mm X 1.5mm & 2.0mm X 2.0mm

Set 58-0670/58-0670S also includes: 1.8mm Slotted X #00 Phillips & 2.2mm Slotted X #0 Phillips

58-0670 6 piece Screw Extractor & Screwdriver Set blue handle

58-0670S 6 piece Screw Extractor & Screwdriver Set clear handle

58-0675 4 piece Screw Extractor Set
